LARCH

01 · COMPANY + CHALLENGE

Company profile

Larch Technologies helps businesses streamline complex manufacturing processes through integrated digital solutions that improve productivity, reduce operational inefficiencies, and support data-driven decision-making. With a focus on industry-specific requirements and continuous process improvement, the company enables organizations to achieve better coordination across departments, maintain consistent product quality, and build more efficient, reliable, and scalable operations

The Challenges

- Difficulty tracking material and components throughout production
- Manual recording of production and inspection activities
- No centralized visibility of work-in-progress status
- Difficulty tracing a finished fan back to its production stages
- Separate records for production,quality and final inspection

LARCH

Key Operational Challenges

Material tracking

Raw materials and components were difficult to follow throughout production.

Manual documentation

Production activity and inspection results were recorded manually.

Limited visibility

Work-in-progress status was not centrally visible.

Traceability gaps

Finished-fan manufacturing history was difficult to identify.

Disconnected records

Production, quality, and final inspection information sat separately.

Business impact

Limited operational visibility, time-consuming record retrieval, and harder investigation of production and quality issues.

LARCH

LarchERP connects manufacturing activities with reliable product-level records across the operation.

- Digitized the cross-flow fan manufacturing workflow.
- Tracked material receipt and movement across production stages.
- Recorded production activities and work-in-progress status.
- Integrated inspection and quality checkpoints.
- Maintained product-level manufacturing and inspection records.
- Centralized production and quality information for easier access.

LARCH

Connecting Every Stage of Manufacturing

Production and inspection information is captured across the full lifecycle, from receipt to dispatch.

01 **Material receipt:** Record incoming raw materials and components.

02 **Incoming inspection:** Verify materials against quality requirements.

03 **Component processing:** Track manufacturing activity and component movement.

04 **Assembly:** Record assembly progress and production status.

05 **Annealing:** Maintain records of the annealing stage.

06 **Knock test:** Capture the relevant test results.

07 **Final quality check:** Record final inspection outcomes.

08 **Finished goods:** Maintain finished-product identification and records.

09 **Dispatch:** Connect finished-product records with dispatch information.

LARCH

Improving Production Visibility and Traceability

End-to-end traceability

Connected product history across manufacturing stages.

Production visibility

Improved access to production progress and work-in-progress status.

Centralized quality records

Organized inspection and testing information.

Faster issue investigation

Easier access to manufacturing history when investigating issues.

Supporting outcomes: better coordination between production and quality, improved visibility from incoming materials to dispatch, more structured documentation, and centralized access to production and inspection information.

LARCH

Delivering Greater Control Across Manufacturing

Key benefits

Complete traceability
Maintain product-level manufacturing history

Better quality management
Maintain inspection and testing records

Connected workflows
Link manufacturing stages with finished goods and dispatch.

Improved monitoring
Access production and work-in-progress status.

Efficient issue investigation
Access relevant production history more easily.

Centralized information
Reduce dependence on scattered manual records

LarchERP provides a centralized approach to cross-flow fan manufacturing by connecting material receipt, production, inspections, finished goods, and dispatch in one traceable workflow.

Connecting Every Stage of Manufacturing. LarchERP enables better operational visibility, centralized documentation, and end-to-end product traceability.
